

第十四章 含氮化合物

Nitrogen Compounds

1

CONTENT

- 1 硝基化合物
- 2 胺的结构和物理性质
- 3 胺的制备
- 4 胺的化学性质
- 5 季铵盐化合物
- 6 重氮与偶氮化合物

2

硝基化合物的还原反应

常用
Fe / HCl
Zn / HCl

3

硝基对氯苯水解影响

硝基对苯环上邻对位取代基的影响

4

胺的结构和物理性质

• Structures of aliphatic amines

• Structures of aromatic amines

8

胺的制备

Gabriel 合成法

6

醛和酮的氨化还原

其它制备方式请自学

7

测试

1) 以苯、甲苯以及不超过3个碳的有机试剂合成下列物质

8

胺的化学性质

胺的碱性和成盐

9

胺的烃基化

为什么不能用氯代烃直接制备伯仲叔胺?

10

磺酰胺

Primary and secondary amines react with sulfonyl chlorides to form **sulfonamides**.

29

磺酰胺药物

Sulfa Drugs

30

胺的分离鉴定

胺的磺酰化：用于鉴别分离伯胺仲胺和叔胺

13

脂肪族胺与亚硝酸反应（了解）

14

芳香胺与亚硝酸反应

15

芳胺的亲电取代反应

16

芳胺硝化、磺化反应

氨基在强酸作用下，由活化基团变成了钝化基团，因此最好将氨基保护后，再进行硝化、磺化反应

17

季铵盐化合物

18

季铵碱受热分解反应

19

霍夫曼 (Hofmann) 消除

霍夫曼 (Hofmann) 消除

当季铵碱分子中有两个以上不同的氢原子可被消除时，反应主要从含氢较多的碳原子上消去氢原子，即主要生成双键碳原子上烷基取代较少的烯烃

20

应用：推测胺的结构

21

测试

完成下列转化

22

重氮与偶氮化合物

重氮盐的制备——重氮化反应

- 重氮盐是无色晶体，在干燥条件下不稳定，爆炸性强
- 重氮盐一般不溶于有机溶剂，可溶于水，其水溶液呈中性，在水溶液中发生离子化，溶液具有导电性
- 重氮化反应要在酸性条件下进行，酸的用量一般为1.5倍

23

芳香重氮盐在合成上的应用

(1) 失去氮的反应

24

被氢所取代（去氨基反应）

被羟基所取代

被卤素取代

25

偶氮化合物制备

（2）保留氮的反应

• 还原反应

• 偶联反应

26

偶联反应

在微酸性中性或微碱性溶液中，重氮盐正离子作为亲电试剂可与连有强供电基的芳香族化合物，如酚芳胺等发生亲电取代反应生成偶氮化合物

27

Example

测试

请同学合成下列物质：

29

作业

1. 用简单的化学方法鉴别下列各组化合物

2. 排序题

按碱性由强到弱排序

3. 完成下列转化

4. 以苯、甲苯、C2及以下有机物合成下列物质

30
